

SAMPLE REPORT. Demonstration data for a fictional store (acme-robotics.example). Every purchased report is generated live against your site.

acme-robotics.example

Generated July 28, 2026 · Probed with claude-haiku-4-5 + live web search

Cited in 1 of 6 markets probed.

In 2 more, you appeared in the assistant's search results but were not cited: it saw you and chose others.

Market by market

Each question was written for that market (in its language, never naming your brand) and asked from that market's location with live web search. The question is printed so you can judge it.

United States **FOUND, NOT CITED**
"best warehouse robotics supplier for small factories"
Recommended instead: roboteq.example, fetchrobotics.example, locusrobotics.example

United Kingdom **FOUND, NOT CITED**
"warehouse automation robots for smaller uk manufacturers"
Recommended instead: ocadogroup.example, roboteq.example

Germany **NOT CITED**
"beste lagerroboter für mittelständische fertigung"
Recommended instead: kuka.example, swisslog.example

France **CITED**
"meilleurs robots logistiques pour petites usines"

Spain **NOT CITED**
"mejores robots de almacén para fábricas pequeñas"
Recommended instead: mecalux.example

Japan **NOT CITED**
(asked in the local language; this PDF's font cannot show that script)
Recommended instead: daifuku.example, fanuc.example

Who assistants recommend instead

Every domain the answers cited, ranked by how many markets recommended it. Where AgentSpeed has publicly scanned a domain, its agent-readiness score is shown. A missing score means we have not scanned it, not that it has none.

DOMAIN	MARKETS CITING IT	SCORE
roboteq.example	2 of 6: en-GB, en-US	81 (B)
kuka.example	1 of 6: de-DE	66 (C)
daifuku.example	1 of 6: ja-JP	not scanned

fanuc.example	1 of 6: ja-JP	not scanned
fetchrobotics.example	1 of 6: en-US	73 (C)
locusrobotics.example	1 of 6: en-US	not scanned
mecalux.example	1 of 6: es-ES	not scanned
ocadogroup.example	1 of 6: en-GB	not scanned
swisslog.example	1 of 6: de-DE	not scanned

Your own agent-readiness score: 71 (C), from your most recent public scan.

Reading this report

- These are one assistant's answers at generation time. Assistants vary between runs and vendors; treat trends, not single answers, as signal.
- "Found, not cited" is the most actionable state: the assistant saw you in its search results and chose others. That is usually a readability or structured-data gap, which a scan pinpoints.
- Free scan for any domain in this report: <https://agentspeed.com/scan>

AgentSpeed · <https://agentspeed.com> · probes performed with claude-haiku-4-5 + live web search

This report is a snapshot. Agents keep reading.

Today, acme-robotics.example stands at 71/100 (C). AI assistants re-read sites continuously, and a deploy, a new cookie banner, or a stray robots rule can change what they see without anything erroring. The fixes in this report are worth the most while they are fresh.

AgentSpeed Monitor · \$29/mo per domain

We rescan your domain every week against the same public rubric this report used, and email you exactly what changed: your score, its movement, and any checks that regressed. Cancel any time from any digest.

The Complete Audit · \$149

All three audits (the whole-site Deep Scan, the multi-market AI Market Report, and the Agent Transaction Audit) in one order, saving \$58 against buying separately. Already a Complete Audit buyer? All three are included and on their way.
